Obtaining and maintaining an accurate track of all software and hardware inventory is one of the daunting challenges faced in IT. At Kryptos, our expertise and process-documentation assist

IT Audit

Our IT audit services involve 3600 collation and tagging of all IT assets. This is essential for an organisation to understand current status of its IT inventory. We create compliance and

IT Asset Management

Compliance is a huge responsibility. IT asset management services from Kryptos ensure that governance rules are adhered to and documented in a timely manner. Asset tracking and management plays a tactical role in IT-buying and improving inventory controls.

Whether in a central location or spread across a global enterprise, our IT asset and audit practices help in

- Documenting asset and ownerships
- Detecting loss
- Mitigating risk
- Ensuring drive-up compliance

Software Asset Management

1. Document available software licenses and tag use rights
2. Create awareness about software compliance guidelines
3. Mitigate risk associated with non-compliance
4. Enforce governance of software use
5. Consult in reducing cost over unused assets and propose right sizing
6. Provide need-analysis and new-purchase support
