

Active Directory & Mailbox Migration (Consolidation) USER CASE

Problem Statement:

A large UK based healthcare organization, dedicated to conducting clinical research and has been investigating the effectiveness of new medicines and treatments for more than 20 years.

The company merged with two of its subsidiaries and wanted a centralized Active Directory and Messaging Infrastructure for the merged entities having more than 5000 users and 5000 mailboxes in total.

The merged entity was spread across three continents, and present in 20+ countries. Customer' need is to consolidate and migrate the Active Directory and Messaging Infrastructure across different locations / users in the organization.

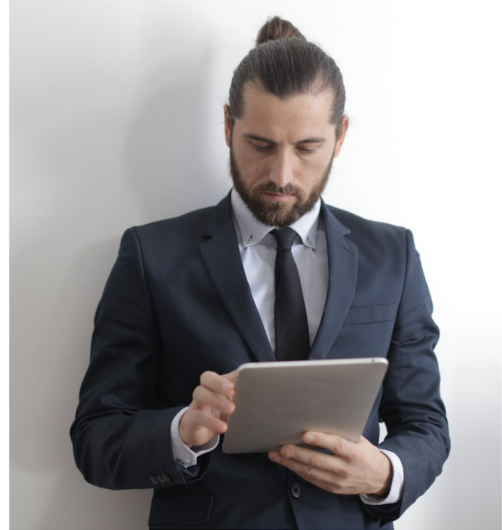

Solution Delivered:

Kryptos offered a phased approach to implement this solution.

Discovery phase with the company's HQ and its subs, where information about the current AD and On-premises Exchange server setup, number of users, server information, forest functionality, user objects etc. were collected from all three business entities. Kryptos designed an AD migration and O365 migration solution with clear focus on reliability, security, performance, and end-user experience, in consideration.

The solution was to create a consolidated AD Forest/ Domain architecture with identity, security, and access management policies & governance in place. AD and Mailbox migration was performed using Microsoft's native tool and following best practices.

Active Directory & Mailbox Migration (Consolidation) USER CASE

Solution Benefits:

- . Centralized Policy Management & Governance using AD policies
- . Messaging & collaboration between different teams.
- . Seamless integration with all resources for the users.
- . Improved overall efficiency.
- . Optimal connectivity and resource availability
- . Improved business and employee productivity.
