

USER INTERFACE PRODUCT AS A SERVICE FOR A LEADING HEALTHCARE SERVICE PROVIDER

Customer Overview

The customer is a healthcare client and is on the frontline of providing actionable Comprehensive Determinants of Health (CDoH) insights for healthcare payers, providers, health IT companies and consulting firms.

Business Requirement

The customer presently operates from several locations and had many challenges in maintaining, supporting and protecting their existing legacy reports. Being into healthcare business, the owners wanted to create a PaaS Infrastructure solution which involved Azure and Power BI based reporting. They had maintained every minute details of all the data related to the incidents happened, but all are in multiple formats & they do not have any pointers on where to start the analysis from.

Kryptos' Planned Approach

Kryptos offers Azure PaaS services in providing cloud solutions to the clients of varied industries like healthcare. Our Azure development team delivered a cloud-based solution to re-engineer the client's legacy product suite for around 300+ users to perform custom calculation of points, serialization of sales and partner details, maintain persistence, handling interactive events, create new SQL database with imported database settings from on-premise. We used Power BI connectivity and embedded subscription in our solution to produce detailed reports which can be sent to each of our partners.

Key Deliverables of Kryptos

- Maintain Data integrity, embed calculation logic and report data/visuals
- Manage Single user to upload the input files from Sales.
- Single partner dashboard launches with around 5 major tenants.
- Multiple report creation - each partner getting a report that shows only their data (Compliance)
- Single report for all partners - partner seeing only their data.
- UI Authentication from AAD - Each Partner.
- Upselling product in Dashboard for each partner with Mark-up.

About Kryptos Technologies

Kryptos is a leading global IT Infrastructure service provider. We deliver complete IT Services and Solutions for Cloud and On-Premise infrastructure. Accelerate your transformation journey boldly with our smarter, faster, safer and integrated approach. Grow your business with our quality-assured delivery. We are also a Microsoft Gold Partner, Azure Expert MSP, and an AWS Premier Consulting Partner.
